University Projects

Donation Managment System

• Donation Managment System is a web application . which is created for purpose online charity.
• We created a this project for the people who donate freely and on trustable plateform. So our this project will help them to make this possible.
• We used technologies like for frontend html , css and javascript with help of react library. And for databse we used Mongodb and for server side scripting we used node.js.

- We try to connect with ngo's to get amount on side.

Library Managment System

- Library management system is project that manages and stores books information electronically according to student .
- Also Added a place order and view order and calculate fine etcetra features are added. So this one project will help to manage Whoe system of library.
- Created Admin login page , user login page and also have a search option which is helps students to get a book.
